PLACEIN ADMIN

Complete project

Agency portal and head office, backed by a NestJS API, Prisma and a local PostgreSQL database. Swagger documents every route. The admin console reads and writes that API.

admin/ · backend/ · database placein on localhost:5432

1. What this project contains

PlaceIn is a property workspace for agencies and for the head office that supervises them. Seekers use the product for free. Agencies pay a monthly plan. PlaceIn does not take a commission, and the sale or letting itself happens outside PlaceIn. The admin records what an agency reports.

The two WhatsApp folders in admin/ hold 44 design references: 22 agency screens and 22 head-office screens. The running console covers those screens, plus the sign-in, password recovery and invitation screens. Head office is H01 to H24. The agency portal is A01 to A22. Each screen calls the API. A person signed into the wrong portal sees a permission message instead of another agency's data.

2. How to run it

PostgreSQL 14 is local, on port 5432, with the role pino and the database placein. From the backend folder:

npm install

npx prisma migrate deploy

npx prisma generate

npm run seed

npm run build && npm run start

The API listens on http://localhost:4000. Swagger UI is http://localhost:4000/api/docs and the OpenAPI document is http://localhost:4000/api/docs-json. Copy backend/.env.example to backend/.env if the environment file is missing. DATABASE_URL is postgresql://pino@localhost:5432/placein?schema=public.

From the admin folder, with admin/.env.local setting NEXT_PUBLIC_API_URL to http://localhost:4000:

npm install

npm run dev

Open http://localhost:3000. The session is stored in the browser under the key placein-session.

3. Accounts and access

Every seeded account uses the password PlaceIn2026!.

Email	Role	What they can open
ahad@placein.com	Super admin	Every head-office screen, finance, deletion and staff changes.
support@placein.com	Admin / support	Head office. Finance is off, so invoice amounts and billing exports stay closed.
tech@placein.com	Maintenance	Technical tickets and platform health. Invoices, billing and user export return 403.
sarah@aminaproperties.my	Agency owner	Amina Properties only, including that agency's own invoices.

Other seeded agencies are Lisbon Living, Palm Estates, Riviera Estates (in review, joined four days ago), Harbour & Co (past due) and Sakura Homes (restricted). Aisyah Rahman's invitation token is invite-aisyah-demo. Two-factor, once enabled, shows its code a single time and then requires that code at sign-in.

4. Architecture

The admin app is a Next.js client. It does not embed business rules. After sign-in it sends the bearer token on every request. Lists use the envelope data, total, page, pageSize and pageCount. The user list also returns registeredUsers and filteredCount.

The API is NestJS 11. A global guard reads the JWT, checks that the session row is still active, and applies role and finance metadata. Prisma 6 talks to PostgreSQL. Uploaded files are written to backend/uploads and served from /uploads. Validation strips unknown fields. CORS is open for local development.

An agency user carries agencyId in the token. Directory, listing, enquiry, offer, appointment, invoice and ticket queries are filtered with that id. Staff can read across agencies. There is no impersonation switch.

5. Rules enforced by the API

Rule	What the API does
Monthly fees only	Plans are Starter 99, Growth 249, Professional 499 and Enterprise 899, in the agency currency. Seekers are free and have no invoices.
No commission	Sold, let and withdrawn are agency reports. They are not transactions and not commission records.
Offer is not a sale	Accepting an offer leaves the property status unchanged. A reported outcome is a separate action.
Publication is separate	A listing can be unpublished while the property is still available, or live while it is under offer.
Photo quality	Below the platform minimum, 1600 by 1200, submission is rejected. A quality-failure item cannot be approved.
Overdue billing	Past due, expired, cancelled or an overdue invoice blocks a new publication. Listings that are already live stay up.
One agency	A token for Amina Properties cannot read Lisbon, Palm, Riviera, Harbour or Sakura records.
Maintenance	No invoices, no billing settings, no user export. Technical tickets are assigned to this role.
Deletion	Only a super admin can confirm anonymisation.
Messages	Enquiry reporting stores a summary. The private message body is not kept.
Currency	Head-office money is converted to GBP with the rate table on platform settings, not a live feed.
Sessions	Logout and revoke-sessions invalidate the session id carried in the token.
Appointments	Two confirmed bookings for the same agent inside one hour are rejected.

6. Plans, markets and rates

Plan	Monthly fee	Agents	Listings
Starter	99	5	50
Growth	249	15	200
Professional	499	40	800
Enterprise	899	100	5000

Seeded countries are Malaysia (MYR), Portugal (EUR), United Arab Emirates (AED), Spain (EUR), United Kingdom (GBP) and Japan (JPY). Stored units per 1 GBP are MYR 5.6, EUR 1.17, AED 4.7, JPY 190 and USD 1.27. On 13 October 2026 the Malaysia office total for paid invoices was 89 GBP, which is the 499 MYR Amina receipt divided by 5.6.

7. Data model

Prisma holds one schema, applied by the migration 20261013000000_init. The seed clears and reloads the local placein database, so npm run seed removes records created during a demo.

Area	Models
Access	StaffUser, AgencyUser, Session, PasswordReset, AuditLog
Directory	Country, Agency, Project, ProjectAgent
Listings	Property, PropertyPhoto, PropertyStatusEvent, Reel
Seekers	FreeUser, Enquiry, Offer, Appointment, OutcomeReport
Billing	Subscription, SubscriptionChange, Invoice, PaymentAttempt, InvoiceEvent
Support	SupportTicket, TicketMessage, TicketNote, ModerationItem
Platform	PlatformSetting, NotificationTemplate, Announcement
Health	ServiceStatus, AppError, UploadJob, BackupStatus, Incident
Metrics	DailyMetric, MetricDefinition

Commercial status is available, under offer, sold, let, withdrawn or expired. Publication is draft, pending review, changes requested, live, unpublished, rejected or taken down. Account status includes invited, active, restricted and deletion requested.

8. Agency screens

These are the agency portal. Sarah Lim lands here. A head-office account is sent back if it opens one of the agency-only steps.

ID	Screen	Behaviour
A01	Dashboard	Live counts for this agency: available listings, open enquiries, upcoming appointments, reel plays, today's bookings and recent enquiries.
A02	Properties directory	Server search and filters for type, publication and commercial status. Export is a CSV download with the signed-in token.
A03	Add property, details	Creates a draft. Title, price, beds, type and description are saved before the later steps.
A04	Add property, location	Country, city, area, postcode and the private address. The private address is not a public field.
A05	Add property, media	Photos are scored against the platform minimum. A picture under that size is a hard quality failure.
A06	Add property, review	Submit publishes the listing, or sends it to review when the agency requires approval.
A07	Property workspace	Views, enquiries, offers, appointments and status history. Outcome and publication are changed separately.
A08	Reels library	Processing, quality, publication and audience counts. Editing stays in the mobile app.
A09	Upload reel	Saves a draft reel and can submit it for approval or publication.
A10	Projects directory	Agency projects, with a create form.
A11	Project workspace	Project detail, linked agents and the listings inside the project.
A12	Team directory	Agents in this agency, including invited accounts.
A13	Agent profile	Permissions, and reassignment of open work when someone leaves.
A14	Enquiries	Channel, status, assignment and response. Private message bodies are not stored.
A15	Approval queue	Agency-side moderation items waiting for a decision and a reason.
A16	Agency settings	Profile and notification rules for this agency.
A17	Sign in	One form for head office and agency. The API chooses the portal from the account.
A18	Password recovery	Local email is not connected, so the reset token is returned on screen.
A19	Accept invitation	An invited agent sets a name and password. The seeded token is invite-aisyah-demo.
A20	Appointments	Viewings, video calls and office visits. The property supplies the agency and the agent.
A21	Performance analytics	Fourteen days of enquiries and appointments for this agency.
A22	Audience	Reel plays, likes and completion for this agency's published media.

9. Head-office screens

Ahad, Nora and the maintenance account land here. The header country filter and the screen list follow the signed-in portal.

ID	Screen	Behaviour
H01	Platform overview	Agencies, agents, live listings, GBP finance, downloads and attention counts. Country filter is in the header.
H02	Agencies directory	Search, status and payment filters. Maintenance cannot create an agency.
H03	Agency profile	Overview, team, projects, listings, media, leads, appointments, outcomes, subscription and invoices.
H04	Agents directory	Every agent, still scoped to one agency membership.
H05	Agent profile	Permissions, listings, enquiries, appointments and response time. Password hashes are never returned.
H06	Properties directory	All agencies, with the same publication and status split as the agency portal.

ID	Screen	Behaviour
H07	Property details	Activity, media quality and the status history for one listing.
H08	Reported outcomes	Sold, let and withdrawn reports. A correction keeps the previous value.
H09	Reels and videos	Cross-agency media queue. Reel editing stays in the mobile app.
H10	Moderation	Verification, content review, quality failures, user reports and appeals. A quality failure cannot be approved.
H11	Free users	Registered seekers. An agency only sees people already connected to it.
H12	User profile	Activity summary. Staff can open a support ticket, record deletion, or anonymise.
H13	Buyer activity	Offers. Accepting an offer does not mark the property sold.
H14	Connections	Enquiries across agencies. Message text stays out of the record.
H15	Appointments	Book by choosing a property. The same agent cannot hold two confirmed bookings inside one hour.
H16	App analytics	Downloads, registrations, logins, active users and foreground time, with the metric definitions.
H17	Countries	Six seeded markets. Finance roles also see subscription income in GBP.
H18	Subscriptions	Plan, fee and status. Changing a plan needs finance access.
H19	Payments	Paid, unpaid, partial, overdue, void and refunded. Reminders and payment attempts update the invoice.
H20	Support	Replies are visible to the agency. Internal notes are staff-only. Technical tickets go to maintenance.
H21	Staff and audit	Create staff, turn on two-factor, revoke sessions, and read the audit table.
H22	Platform settings	Minimum photo size, plan rules and the stored GBP rate table. Billing fields follow finance access.
H23	Notifications	Templates, plus an announcement preview and a local send record.
H24	Platform health	Service availability, app errors, failed uploads, backups and incidents.

10. API catalogue

Global prefix is /api. Unless a route is marked public, send Authorization: Bearer followed by the access token. Swagger adds a description to each operation. The live document on 13 October 2026 contained 71 paths and 84 operations. The login operation shows a user-agent header because the controller reads that header. The header is not required to sign in.

Method	Path	Purpose
POST	/api/auth/login	Staff or agency sign-in. Returns a bearer token. Two-factor is required when it is on.
POST	/api/auth/forgot-password	Creates a reset token. Local development returns the token.
POST	/api/auth/reset-password	Sets a new password and revokes open sessions.
POST	/api/auth/accept-invite	Activates an invited agent and opens a session.
GET	/api/auth/me	Current profile and permissions.
POST	/api/auth/logout	Revokes the current session.
GET	/api/live	Process liveness. Public.
GET	/api/dashboard/office	Head-office totals. Finance figures are omitted without finance access.
GET	/api/dashboard/agency	The signed-in agency only.
GET	/api/agencies	Staff directory. An agency token receives 403.
POST	/api/agencies	Create an agency application.
GET	/api/agencies/{id}	Profile tabs. Finance tabs follow the caller's permission.
PATCH	/api/agencies/{id}	Profile and notification rules.
POST	/api/agencies/{id}/status	Change account status.
POST	/api/agencies/{id}/invites	Invite an agent. The token is returned locally.
GET	/api/agents	Agent directory, scoped to one agency for an agency user.

Method	Path	Purpose
GET	/api/agents/{id}	Agent profile without the password hash.
PATCH	/api/agents/{id}	Permissions and profile.
POST	/api/agents/{id}/reassign	Move listings, open enquiries, future appointments and project membership.
GET	/api/properties	Directory. Publication and commercial status are separate filters.
POST	/api/properties	Create a draft, inside the agency listing allowance.
GET	/api/properties/{id}	Detail and activity. Another agency receives 403.
PATCH	/api/properties/{id}	Details or location.
POST	/api/properties/{id}/photos	Attach photos and score resolution.
POST	/api/properties/{id}/submit	Publish or send to review. Quality failure and overdue billing block this.
POST	/api/properties/{id}/status	Record sold, let, withdrawn or another commercial status.
POST	/api/properties/{id}/publication	Change publication without changing the commercial status.
GET	/api/projects	Project directory.
POST	/api/projects	Create a project.
GET	/api/projects/{id}	Project workspace.
GET	/api/reels	Reels and walkthroughs.
POST	/api/reels	Save a reel draft.
POST	/api/reels/{id}/submit	Submit or publish a reel.
GET	/api/enquiries	Connections. Summaries only, no private message body.
PATCH	/api/enquiries/{id}	Assign or answer.
GET	/api/offers	Buyer offers, with the property status beside the offer status.
PATCH	/api/offers/{id}	Acknowledge, accept, decline or withdraw. Acceptance does not sell the property.
GET	/api/appointments	Viewings, calls and office visits.
POST	/api/appointments	Create. Agency and agent are taken from the property when omitted.
PATCH	/api/appointments/{id}	Confirm, reschedule, complete, cancel or mark a no-show.
GET	/api/outcomes	Reported outcomes and a page summary.
POST	/api/outcomes/{id}/correct	Store a correction and keep the previous value.
GET	/api/moderation	Queues: verification, content, quality, reports, appeals.
POST	/api/moderation/{id}/decide	Approve, request changes, reject or take down. A reason is required.
GET	/api/users	Seekers. Agency callers only see people who enquired, offered or booked.
GET	/api/users/{id}	Staff profile and activity.
POST	/api/users/{id}/deletion-request	Record a deletion request.
POST	/api/users/{id}/confirm-deletion	Super admin anonymises the account.
POST	/api/users/{id}/support	Open an account-support ticket.
GET	/api/subscriptions	Plans and fees. Fees are hidden without finance access.
POST	/api/subscriptions/{id}/plan	Change plan. Finance only.
GET	/api/invoices	Owner sees one agency. Maintenance receives 403.
POST	/api/invoices/{id}/remind	Record a reminder.
POST	/api/invoices/{id}/adjust	Adjust the amount. Finance only.
POST	/api/invoices/{id}/payments	Record an attempt. Status becomes paid, partial or overdue.
GET	/api/tickets	Maintenance sees technical tickets. An agency sees its own.
POST	/api/tickets	Open a ticket. Technical work is assigned to maintenance.
GET	/api/tickets/{id}	Thread. Internal notes are omitted for an agency.

Method	Path	Purpose
POST	/api/tickets/{id}/messages	Customer-visible reply.
POST	/api/tickets/{id}/notes	Staff-only note.
PATCH	/api/tickets/{id}	Status, priority or assignee.
GET	/api/staff	Staff directory.
POST	/api/staff	Create a staff account. Super admin.
PATCH	/api/staff/{id}	Role, finance access, active flag or two-factor.
POST	/api/staff/{id}/revoke-sessions	Revoke open sessions.
GET	/api/platform/settings	Photo minimum, rates and billing configuration.
PATCH	/api/platform/settings	Update those settings.
GET	/api/platform/countries	Markets and performance. GBP income is finance-only.
PATCH	/api/platform/countries/{id}	Activate or retire a country.
GET	/api/platform/analytics	Usage totals and metric definitions.
GET	/api/platform/templates	Notification templates.
PATCH	/api/platform/templates/{id}	Edit a template.
GET	/api/platform/announcements	Announcement history.
POST	/api/platform/announcements	Draft, and return a preview.
POST	/api/platform/announcements/{id}/send	Record delivered and failed counts locally.
GET	/api/platform/health	Availability, errors, uploads, backups and incidents.
POST	/api/platform/incidents	Open an incident.
PATCH	/api/platform/incidents/{id}	Update an incident.
POST	/api/platform/uploads/{id}/retry	Retry a failed upload when it is eligible.
GET	/api/platform/audit	Audit history.
GET	/api/platform/search	Header search. Free-user hits are staff-only.
GET	/api/exports/{kind}	CSV for properties, agencies, invoices or users. Same permission rules as the screens.
POST	/api/uploads	Store a file under backend/uploads.
GET	/api/plans	Monthly catalogue. Requires a signed-in token.

11. What was checked

Checked against the running API and the admin on localhost, 13 October 2026.

Check	Result
Swagger	http://localhost:4000/api/docs returned 200. The document lists 71 paths and 84 operations.
Malaysia office	One active agency. Paid invoices 89 GBP. Outstanding 89 GBP.
Amina dashboard	2 available listings, 4 open enquiries, 28,000 reel plays, 3 appointments today.
Seeker scope	Staff see 16 registered users. Sarah sees 6, the people already connected to Amina.
Agency boundary	Sarah receives 403 for the agency directory and for a Harbour property.
Photo gate	Submitting PR0005 Seaview Penthouse returns 400 because a photo is below the minimum.
Offer rule	Accepting an offer left the property Available.
Appointment clash	A second confirmed booking for James Wright, 30 minutes later, returned 400.
Maintenance	Invoices and the invoice export return 403. Platform health returns 200.
Admin typecheck	npx tsc --noEmit in admin completed with no errors.
Browser walk	Chrome opened the sign-in screen, Sarah's dashboard and property list, then Ahad's overview, invoices and platform health. The only missing asset was favicon.ico.

12. Local limits

Password reset and invitation tokens are returned by the API because local email is not connected.

Payments are a ledger of attempts. There is no card provider.

Push delivery is not connected. Sending an announcement stores delivered and failed counts.

Foreign exchange uses the stored rate table. It does not call a live rate service.

Reel trimming and the seeker mobile app are outside this admin. The admin records publication, quality and audience counts.

npm run seed deletes the current placein data and loads the demo again.

Source of the screen rules: the head-office developer screen plan dated 8 October 2026, together with the 44 design references stored beside the admin app.
